Meet either A,
B, or C

A) Close contact*
with patient
infected with nCoV

B) Stayed in Hubei or
Zhejiang, China,
within 14 days prior
to symptoms onset

C) Close contact* with
a person who
stayed in Hubei or
Zhejiang, China
within 14 days prior
to symptoms onset

Close contact*
with patients
infected with
nCoV

No

If you have any
symptoms, have a
rest at home or
consult with your
primary care doctor

Yes

Yes

Call health
center in your
town.

No

*Close contact means:

1. Living with the suspected patients or prolonged contact with them
(in a car, on an airplane, etc.)
1. Caring for suspected patients without proper PPE
2. Highly likely to have directly touched the patient's sputum or saliva

If you suspect you are infected, first call your local health center (HC) before visiting the hospital. The public health centers will ensure suspected patients will be connected to the proper medical institutions. In some cases, we may ask you to see a general clinic if it is considered appropriate.
